Professional Summary

Recent Computer Systems Engineering graduate and Data Science enthusiast with hands-on experience in data analysis, machine learning, and deploying end-to-end AI solutions. Skilled in data preprocessing, feature engineering, exploratory data analysis, and model evaluation using Python and ML frameworks.

Technical Skills

Languages: Python, SQL, HTML, CSS
Data Science & ML: Scikit-learn, TensorFlow, Statistical Analysis, Machine Learning, Deep Learning
Data Analysis: Pandas, NumPy, Matplotlib, Seaborn
Tools & Platforms: Jupyter Notebook, Google Colab, Power BI, Git, GitHub, Streamlit, FastAPI
Concepts: Data Cleaning, Feature Engineering, Exploratory Data Analysis (EDA), Model Evaluation, Imbalanced Data Handling, Data Visualization

Education

BSc (Hons) Computer Systems Engineering (BSc.IT)
International School of Management and Technology, Kathmandu
Oct 2022 – Nov 2025
Higher Secondary Level (+2)
Modern Public Secondary School, Nepalgunj
May 2020 – Sep 2022

Projects

Credit Card Fraud Detection System GitHub — Live Demo — Notebook

- Developed an end-to-end fraud detection pipeline on real-world financial transaction data.
- Performed data preprocessing including encoding categorical variables and handling missing values.
- Addressed severe class imbalance using SMOTE oversampling techniques.
- Trained multiple machine learning models including Logistic Regression, Random Forest, and XGBoost.
- Implemented probability-based threshold tuning to improve classification performance.
- Evaluated models using metrics such as Accuracy, Precision, Recall, F1-score, and ROC-AUC.
- Saved trained models using Joblib for deployment and reuse.

Solanix AI – Potato Disease Detection GitHub — Live Demo

- Built a CNN-based image classification system for potato disease detection.

- Applied transfer learning and data augmentation for better generalization.
- Deployed a real-time web application for image-based prediction.
- Achieved high validation and test accuracy using deep learning models.

Diamond Price Prediction GitHub

- Built a regression pipeline to predict diamond prices using multiple features.
- Performed feature engineering, encoding, and scaling for optimization.
- Evaluated models including XGBoost for performance comparison.
- Achieved strong predictive performance using R^2 metric.
